

START WITHOUT THE MAGNETS.

We encourage parents and teachers to have a child begin playing without attaching the magnets to the design tiles. Manipulating the design tiles without the aid of the magnets requires greater dexterity and patience. Children need to develop their fine motor skills to coordinate the small muscles in their hands and fingers. These skills are essential to completing tasks such as writing, cutting, using a fork or spoon, threading beads, zipping, buttoning and tying shoe laces, etc..

Once the child demonstrates the ability to manipulate the design tiles, keeping the tiles within the prescribed areas, the magnets may be applied. Please clean the tiles before applying the magnets to assure maximum adhesion. The magnetized design tiles make traveling with MightyMind activity sets easier and more enjoyable. The MightyMind Design Tile sets can be used interchangeably with other MightyMind activity sets and design books. You can see the range of MightyMind products at www.mightymind.com

We Care!

Our products have been subjected to rigorous testing and we apply the highest standards of quality control to assure your complete satisfaction. We have done everything possible to assure that our products exceed industry and government standards for child safety. Colors and materials are non-toxic and absolutely harmless to children. We caution parents and teachers to exercise reasonable judgment with respect to children handling small parts, as some may have a tendency to place these in their mouths which could result in choking or strangulation. **WARNING!** This product contains magnets or magnetic components. Magnets sticking together or becoming attached to a metallic object inside the human body can cause serious or fatal injury. Seek immediate medical help if magnets are swallowed or inhaled.

APPLY THE MAGNETS TO THE DESIGN TILES. THE SURFACE OF THE DESIGN TILES MUST BE CLEAN AND DRY.

1. Peel a magnetic shape from the adhesive backing and match it with the corresponding design tile shape.
2. Be very careful not to touch or allow anything to contact the sticky surface of the magnet.
3. Hold the flexible magnet between the index finger and thumb using both hands to exactly center the magnet directly over the design tile without touching the tile's surface.
4. Gently and carefully lower the magnet to meet the center of the design tile and stick it to the tile's surface so that the magnet does not exceed the perimeter of the shape. Turn the design tile over with the magnet touching the table surface and apply pressure to set the adhesive firmly against the tile.
5. **CAUTION!** - The adhesive is very strong and cannot be repositioned after application. If a magnet is miss-positioned, carefully trim the magnetic material so that it does not exceed the edges of the design tile.

DAZZLE THE IMAGINATION OF ANY CHILD BY FOLLOWING THESE SIMPLE STEPS.

MIGHTYMIND® SEA EXPLORER

Explores a fascinating underwater world as a child discovers the way basic shapes can be combined to make delightful pictures and designs.

The patterns provide an extension of the stimulating designs your child had learned to build with MightyMind® and SuperMind basic sets. The Sea Explorer patterns are arranged in alphabetical order, carefully sequenced and programmed to present concepts of increasing difficulty with a minimum of frustration for a child.

Follow these simple steps:

1. Observe the 32 design tiles and notice that they are divided into 6 basic geometric shapes, 4 colors, large and small sizes. The shapes are also proportional: 2 triangles = 1 rhombus (diamond); 4 small rhombi (diamonds) = 1 large rhombus (diamond); 2 small squares = 1 rectangle; 4 small squares = 1 large square; 2 semicircles = 1 large circle.
2. Using the unique MightyMind Design Tiles, a child has to perform 3 basic activities: FIND – MANIPULATE – BUILD to complete a picture. Each puzzle has an outlined picture pattern, which should be completely covered by the shape tiles. Beginning with pattern (A), a child selects tiles and places them over the printed diagram, staying within the bold lines. Having found and fitted the shapes correctly within the guidelines, the child should maneuver the other tiles to build the figure.
3. A child will enjoy greater satisfaction and reward if the patterns are presented in alphabetical order. The solutions to each puzzle are provided on the back of the last design pattern card "Z".
4. The pattern solutions presented may be completed using more design tiles than shown, because a number of smaller tiles may be substituted for a larger tile of the same shape. For example, 2 triangles may be substituted for a single rhombus.

5. Most of the patterns require overlay construction. Shape tiles are placed upon other tiles to add dimension and enhance the finished picture. A "window" is provided adjacent to each pattern as a position reminder. Naturally, the magnets will not adhere to plastic.
6. Be tolerant. Never push a child that may be having difficulty solving a particular problem. Discovery is part of the joy of learning. Be satisfied as long as the child shows an inclination to want to solve the problem. If you want to assist, provide only small parts of the solution. A child's ability to analyze and discern how large forms are created from simple elements is an important step in developing the ability to reduce large problems into solvable parts.
7. Many children enjoy playing together and sharing the challenging experience of building these unique design patterns. You can obtain additional sets of colorful MightyMind/SuperMind Design Tiles and design patterns from your local retailer. Please go to www.mightymind.com for the name and location of a convenient retailer.

We welcome and appreciate receiving your comments and suggestions about our products. Please write to us at: staff@mightymind.com

WARNING! Not for children under 3 years. Small parts. Choking hazard.

This product contains small magnets. Swallowed magnets can stick together across intestines causing serious infections and death. Seek immediate medical attention if magnets are swallowed or inhaled.
