My daughter absolutely loves this game. She can play with it for hours and stay mesmerized by it. I would heartily recommend it to any parent.

★★★★★

### **Great Educational Toy**

I purchased Mighty Mind for my son shortly after his 3rd birthday. He loves to figure out the puzzles and is able to do the more difficult ones already. It is amazing how this toy teaches a child the concept of two squares making a rectangle, two triangles make a diamond, etc. He will definitely be getting the second part of this learning tool: SuperMind. This toy definitely builds confidence in kids, when they complete a puzzle. They are learning without even realizing it!

★★★★★

### **Taught me a thing or two**

Reviewer: **Kimberly Bousquet**

I purchased this educational toy for my daughter's third birthday. Even though it was challenging, she caught on quickly, and plays with it almost everyday, I'm going to purchase a higher level of difficulty to build upon the skills she already mastered with this set. It also is a great conversation piece at holidays and gatherings at the house, where toys are brought out, because believe it or not, it challenges adults and kids of all ages. It took me a few minutes to figure out a few of the higher level puzzles. Great buy.... since we're all looking for that educational toy that the kids are going to love, and not get bored with. Just watch those little pieces, especially if you have smaller children, or toddlers who still put everything in their mouth.

★★★★★

### **One of the best toys we have**

Reviewer: **M. Pizarro "maral"**

(San Juan, PR)

Excellent toy. It will keep kids busy for a while. I have three kids, including twins (3 1/2), they all loved this product. I also have the super mighty mind (different puzzles, same pieces, more difficult). The toy comes with a series of pieces in various shapes and colors. The pieces are very easy to handle, very durable. The objective is to pick a card (these are large cards). First, kids have to identify and pick the pieces they will be using. Then, they form a picture or another figure using this small pieces. The first puzzles are easy. Then the level of difficulty increases. I have bought this product as gifts for friends, all the kids have liked it once they try it. I once saw a "to go" version, same game, same size, but in a travel case.

★★★★★

### **Great Product**

My son absolutely enjoys learning with Mighty Mind. He becomes more confident with each puzzle and looks forward to building new pictures. I recommend this product for fun and educational value. A great gift for children ages 3+!

★★★★★

### **Good practice of reasoning and spatial awareness skill** **Teacher Mom:**

This is a tough thing to teach in schools these days with the push to teach to the tests. As a teacher, I want to at least expose my own children to these types of skills that teach them how to think.

★★★★★

### **Excellent product**

All of my children have enjoyed Mighty Minds. Now on the child #3, we are missing some of the tiles so I am ordering "Super" so that I will have more tiles and different cards. A great learning toy.

★★★★★

### **Entertaining Exercise for the Mind**

Reviewer: **Craig "Just a guy"**

I bought this for my 4 & 5 year old children. They whizzed through all 30 puzzles and begged for more. They had a blast as they encouraged and helped each other. I had a blast watching them cooperate and strengthen their spatial and deductive reasoning skills. It works great for keeping them busy while I make dinner or make phone calls!

★★★★★

### **It caused a near riot in my classroom**

**Thomas J. Barry:**

On the recommendation of a colleague, I purchased 3 Mighty-Minds and a SuperMind (advanced MightyMind) for my classroom. I was absolutely amazed to see the kids clamoring for a chance to play with these. The carefully programmed sequence of the puzzle patterns really encouraged the children to pursue the more challenging puzzles without any encouragement on my part. These simple inexpensive game activities not only build essential logic and developmental skills, they also keep the kids intensively challenged. Even after they've completed a puzzle series, the kids keep going back to try it again and again. I intend to purchase additional design tile sets to expand the basic sets I purchased so the rest of my class can participate during their breaks.
